

Drive success and business value through rapid deployment.

Integrate the best of both legacy systems & next-gen frameworks under a single environment.

CloudIO is an application development and integration accelerator that drives enterprise digital transformation initiatives with pre-built solutions, delivering immediate business value.

With its low-code framework, CloudIO deploys quickly, boosting user productivity, while maximizing legacy system investments with best-in-class and evolving technologies.

Why CloudIO

Data Synchronization & Integration

Workflow & Process Automation

Rapid Application Development

Real-Time Reporting & Dashboarding

Mobile Application for Offline Servicing

Customizable Frameworks for Vendor & Customer Management

Use Cases

Real-Time Inventory Management & Auditing with out of the box integration with ERP systems for a US based grocery chain

Rapid application development to enable end-to-end process optimization for a large SM platform and several other customers

Ready-made Compliance and Reporting application to manage the Internal and SOX compliant external financial reporting

Simplified Order Management system for increased visibility and productivity for a medical device manufacturer

Supplier Connect Platform for onboarding and facilitating engagement with suppliers of leading SM companies

FSG reporting tool to enable granular visibility of financial data for multiple customers
